

## Export and Import of Plants and Plant Materials

We provide Phytosanitary Certificate for forestry species — an assurance that consignments of plants and plant materials meet the required health standards of the importing country. The Head of the division, Forest Pathology, is one of the officers notified by the Government of India, Ministry of Agriculture, New Delhi to grant Phytosanitary Certificate for export of plant materials. We also conduct the phytosanitary inspection of forestry species consignments meant for shipment to India from overseas. The post quarantine inspection and release are also conducted. A dedicated team of scientists having the adequate expertise of all aspects of export inspection and certification process, procedure and protocols ensure effective phytosanitary certification. We maintain records of all the phytosanitary inspections, and the reasons for rejection if any, for each consignment.
